EXPERIMENT 11

Deploying a Zoho Creator Application from Development to Production Environment

Library Book Issue Request Form

Mohammed Saajid Khan M A
241401056

1. Aim

To deploy the Library Book Issue Request Form built in Zoho Creator from the Development environment to the Stage environment for testing, and then to the Production environment, so that a tested and approved version of the application is live and available to end users.

The application manages book issue requests from students, faculty and staff, including member details, book category, number of copies and the preferred issue date, so changes must be reviewed and tested before they reach live users.

2. Procedure

Step 1: Review the application in Development — The dashboard of the Library Book Issue Management application (the Library Book Issue Request Form) was checked: charts by book category, number of copies and member type, with 25 approvals pending and 10 requests declined (Section 3.2).

Step 2: Open the Environments page — Deploy > Environments was opened. The Stage and Production columns were listed, with version 1.0 in Production, and a small change made in the library management form was then detected as *Changes available* (Section 3.3).

Step 3: Select components for Stage — Publish > Publish to Stage was chosen. The modified note field of the library management form was selected and the Development and Staging code was compared side by side (Section 3.4).

Step 4: Enter the publish details — A title, description, version type (Minor) and email notification address were entered; the version change V1.0 to V1.1 was confirmed and the form was published (Section 3.5).

Step 5: Confirm the Stage deployment — The “Publish to Stage initiated” message and the completion email from Zoho Creator were checked, and the form was opened in the Stage environment to confirm the change (Section 3.6).

Step 6: Publish to Production — After testing in Stage, Publish to Production was started with the Publish Now option and the Environments page was used to track it (Section 3.7).

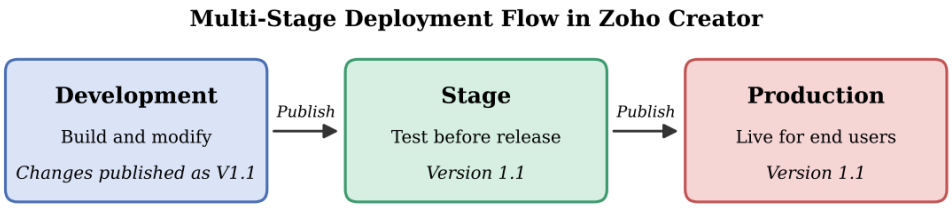

Step 7: Verify the live application — The Production environment and its version were verified on the Environments page (Section 3.7), and the results were summarised (Sections 3.8 and 3.9).

Note: *this record is based on screenshots captured during the deployment. Version numbers, dates and times are reported as shown on screen. Feature names and menu options depend on the Zoho Creator plan and version.*

3. Output

3.1 Multi-stage deployment model

Changes move one environment at a time; the application is in maintenance mode while publishing.

Zoho Creator provides three environments. Development is where the application is built, Stage is a testing copy, and Production is the live copy used by end users. A change is published to one environment at a time, so untested work never reaches live users.

3.2 Application overview (Development dashboard)

The dashboard showed donut and pie charts and a bar chart summarising book issue requests by book category, number of copies and member type (Student, Faculty, Staff), along with the Approvals pending (25) and Requests declined (10) summary tiles.

3.3 Environments page

The Environments page lists the application with Stage and Production columns. When it was first opened, Production held version 1.0 (Oct 11, 2026) and the Stage column showed “Waiting for development app creation”, because Creator was still setting up the Development copy. After a small change was saved in the library management form, the label Changes available showed that Development had changes ready to publish.

3.4 Selecting components and comparing versions

In the Publish to Stage window, the modified component was selected from Forms > library management > Fields. The code view shows Development and Staging side by side for each modified component, here the note field (plain) in the Section of the form.

The Development code contains the updated note text, “Please verify your book issue request details before submitting. Contact the library desk for any corrections.”, while the Staging code still holds the earlier text.

3.5 Publish details

The title was entered as *Library Book Issue Request Form – Initial*, with the description “Initial deployment of the Library Book Issue Request Form application from Development to Stage for testing.” The type was set to **Minor** (minimal changes and bug fixes), email notification was sent to the developer’s registered address, and the version changed from V1.0 to V1.1. A warning stated that the application will be set to maintenance mode and inaccessible until publishing is complete.

3.6 Stage deployment confirmation

After clicking Publish, Zoho Creator displayed “Publish to Stage initiated” and noted that the process takes a few minutes. A “successfully published to Stage” email from Zoho Creator confirmed that the version was published with current version 1.1, initiated on 11 Oct 2026 at 21:49 IST. The Stage application was then opened from the Environments page, and the library management form displayed the new note, confirming that the change reached Stage.

3.7 Production deployment and live status

The tested version (Library Book Issue Request Form – Initial, V1.1) was then published to Production using the Publish Now option. After a few minutes the Environments page showed the Production environment at version 1.1 (Oct 11, 2026), with “No changes available” against the application.

3.8 Deployment summary

Environment	Version	Date	Status	Description
Development	1.1	Oct 11, 2026	Published	Note added to the library management form; no pending changes
Stage	1.1	Oct 11, 2026	Deployed	Version tested in Stage; note displayed on the form
Production	1.1	Oct 11, 2026	Live	Version published to Production after Stage testing

3.9 Deployment practices followed

The deployment followed good release practice: the modified component was reviewed and the Development and Staging code compared before publishing; the version was tested in Stage before Production; the release carried a clear title, description and version type; email notification was enabled and the Stage confirmation email was received; the maintenance-mode warning was noted; and the Environments page was checked after publishing.

4. Final Result

The Library Book Issue Request Form application was deployed through the Zoho Creator multi-stage process. The modified note field of the library management form was reviewed and published from Development to Stage as a Minor release (V1.0 to V1.1), confirmed by the Zoho Creator completion email. After testing, the version was published to Production, where the Environments page shows it at version 1.1.

The exercise met its objective of deploying a Zoho Creator application from the Development environment to the Production environment using controlled, traceable steps.
